

John Boyle

New York City, NY, USA | 206.388.7743 | John.Ng.Boyle@gmail.com

Education

M.S. Computer Science

Expected May 2027

New York University (NYU) – New York City, NY

B.S. Industrial and Systems Engineering

Graduated Aug 2021

University of Washington (UW) – Seattle, WA

GPA: 3.61

Technical Skills

- Languages: Python, SQL, Java, C++, JavaScript, Lua, R
- Data & Backend: Pandas, NumPy, Data Analysis, Data Modeling, System Optimization
- Tools: Git, Jupyter, Linux, Excel
- Relevant Coursework: Algorithms, Data Science, Programming Languages, Database Systems

Projects

Game Developer / Technical Founder, Roblox

Jun 2017 – Present

- Designed, built, and operated large-scale multiplayer games from scratch, owning core systems and backend logic.
- Scaled game “Tower Battles” to a top-10 Roblox game with 650+ million plays (as of May 2026), generating over \$2.0M in net revenue.
- Implemented backend logic to support player progression, state management, and gameplay analytics in a live game.
- Licensed a character toy (Jan 2021) sold via Amazon, Target, Walmart, and Best Buy.

Movie Review Data Engineering

April 2026

- Link to project: asd.com, github: [asd.com](https://github.com/asd.com)
- Built functioning pipeline to work in live setting utilizing SQL, Python, ETL.

Work Experience

Quality Engineer, Astronics

Apr 2022 – Aug 2024

Kirkland, WA

- Ensured aerospace product quality in accordance with AS9100 standards, maintaining a product rejection rate under 1%.
- Applied 5S methodologies to remove production bottlenecks and used Python-based data analysis to improve throughput.
- Reverse engineered production issues and created fast paced solutions to meet production needs without compromising quality.
- Conducted internal/external audits and executed root cause corrective processes.
- Analyzed multi-year industry data in Excel to improve manufacturing efficiency.

Researcher, University of Washington NEST Program

Dec 2020 – Jul 2021

Seattle, WA

- Optimized delays in transportation of critically ill newborns in the Seattle area with simulation-based analysis to reduce mortality rate.
- Assisted in developing a virtual-reality simulation to evaluate neonatal care workflows using the Unity engine.
- Designed a mobile application UI enabling real-time doctor–patient monitoring and reducing communication delay to near zero.
